

° SWALLOW:

A New ALMANACK

For the Year of our LORD 1738.

Being the 2d. after *Bissextile* or *Leap-Year*.

And from the World's Creation, 5741.

Wherein is contained Things fitting for such a Work; as the Terms and their Returns, the Full, Quarters, and Change of the Moon; the Rising and Setting of the Sun and Moon, Length of Days, Planets, Aspects, and Weather; the Moon's Sigas, the Increase or Decrease of every Day in the Year, the Moon's Age, Eclipses, and other Matters of daily Use.

Calculated properly for the Famous University and Town of *CAMBRIDGE*, where the North-Pole is elevated 52 Degrees 12 Min. above the Horizon:

And may serve indifferently for any other Place of this Kingdom.

Homo sum, humani nihil à me alienum puto.

Imprimatur E. B. 3d. June, 1737.

L O N D O N:

Printed by J. JANEWAY, for the Company of
STATIONERS.

Br 3700.6.76

The Anatomy.

Should I but dare to omit the Anatomy,
Which long enough hath gul'd my Country Friend;
He with Contempt would streight refuse to buy
This Book, and it's no *Almanack* contend.
Ask him its Use? He'll say, he cannot tell:
No more can I; yet since he likes it well,
I'll let it stand, because my Book should sell.

The Anatomy of a Man's Body.

Times prohibiting Marriage.

Marriage comes in on the 13th Day of January, and
at Septuagesima-Sunday it is out again, until Low-
Sunday, at which time it comes in again, and goes not
out till Rogation-Sunday: thence it is forbidden until
Trinity-Sunday, from whence it is unforbidden till Advent-
Sunday: but then it goes out, and comes not in again till
the 13th Day of January next following.

Note, That the Exchequer openeth 8 Days before any
Term begins, except the Term of Trinity, in which it
openeth but 4 Days before.

Swallow, 1738.

Of the ECLIPSES that will happen this present Year 1738.

THERE will be no more than Two Eclipses this Year, and but One of those Visible; they happen in the following Order.

The first is an invisible Eclipse of the Sun, on *Tuesday* the 7th Day of *February*, at 6 at Night: It may be seen in *Spain*, and the more western Parts of the World, tho' not in *England*.

The Second is a small and visible Eclipse of the Sun, on *Friday* the 4th Day of *August*, near Noon, according to the following Calculations, as done from the Tables in *Mr. Wings Scientia Stellarum*.

	D.	H.	M.	
Beginning <i>August</i>	4	9	58	} Beforenoon.
Middle		11	3	
End		12	9	} Afternoon.
Duration		2	11	

Digits Eclipsed $4^{\circ} 8'$ on the South Side.

The Spring Quarter begins on *Thursday* the 9th Day of *March*, at 7 at Night.

The Summer Quarter begins on *Saturday* the 10th Day of *June*, at 6 in the Evening.

The Harvest Quarter begins on *Tuesday* the 12th Day of *September*, at 8 in the Morning.

The Winter Quarter begins on *Sunday* the 10th Day of *December*, at 11 at Night.

SWALLOW.

The Latter Part of this ALMANACK

For the YEAR of our
LORD GOD

1738.

Being the 2d after Bissextile or Leap-Year, and from the Conquest of *England* by *William Duke of Normandy* 672 Years.

Wherein is contained an Account of the Eclipses, the Time of the Sun's Entrance into the Four Cardinal Signs. Likewise a Table shewing the Time of the Moon's coming to the South, and Quality of her shining, &c. With an Account of the Moveable Feasts, of Time of a Day, of a Week, of a Month, of a Year, and of the Leap-Year, and of these severally.

A Table of Weights and Measures, and the Value of Foreign Coins in *English* Money.

Also Tables and Rules how to measure Board and Timber. A Table of Interest, Tables for purchasing and putting out of Money for Interest upon Interest: As also a Table shewing the Rising and Setting of the Sun, &c. with the Fairs; in a larger manner than formerly.

LONDON:

Printed by JOHN TILLY, for the Company
of STATIONERS.

**A Table of all the Kings of England, since it
was so called by King Egbert, to this Year 1738.**

Since

Swallow, 1738.

A Table shewing the Time of the Moon's coming to the South, and Quantity of her Shining, for the ready finding the Hour of the Night.

The Moon's Age.	Moon's southing and shin.	Moon's Age for her Sett
1 16	0 48	1 29
2 17	1 36	2 28
3 18	2 24	3 27
5 19	3 12	4 26
4 20	4 0	5 25
6 21	4 48	6 24
7 22	5 36	7 23
8 23	6 24	8 22
9 24	7 12	9 21
10 25	8 0	10 20
11 26	8 48	11 19
12 27	9 36	12 18
13 28	10 24	13 17
14 29	11 12	14 16
15 30	12 0	15

The first Column of this Table shews at what Age the Moon rises after Sunsetting, or after his rising, so many Hours and Minutes as the middle Column shews; as at two days old she rises one Hour and 36 Minutes after the Sun setting, &c. the third Column is for the Moon's setting; as at two Days old she sets one Hour & 36 Minutes before the Sun, &c. The middle Column shews how many Hours and Minutes the Moon shines, which from New Moon to Full Moon, is to be used with the third Column; so for her Southing, as at six days old she is upon the Meridian 48 Minutes past 5 at Night, but at 24 days old she souths 48 Minutes past 5 in the Morning.

The Tide-Table explained.

В 3

The

The 10th Day of February, 1738: I would know at what Hour it will be full Sea at *London-Bridge*, at which Time, (accounting from the Change,) I find the Moon one Day old, which Age I find in the Bottom of the Table; and under the same 0 Hours, 48 Min. Afternoon, the time of the Moon's coming to the South; then finding in the first Column on the left hand, that a South West Moon makes full Sea at *London-Bridge*, I add to her Southing 3 Hours, and it makes 3 Hours 48 Min. for the Time of High-Water at *London-Bridge* that Afternoon. Observe also, that when the Moon cometh to the contrary (or North East Point) it is there full Sea again. Note, That Land-Floods, Spring-Tides, and contrary Winds, make it sooner or later about an Hour.

An Account of the Moveable Feasts.

THE moveable Feasts are so called, for that they have not any fixed Place in the Kalendar, as the fixed Feast Days of the Saints, which are always on the same Days of the Month; but they are varied every Year according to the Diversity of the Moon, and do fall sometimes later, and sometimes sooner.

Quinquagesima is Shrove-Sunday. *Sexagesima* is the Sunday next before Shrove-Sunday. *Septuagesima* is the Sunday Fortnight before Shrove-Sunday, so called in Remembrance of the 70 Years that the *Israelites* were under the *Babylonians*.

Qua-

Swallow, 1738.

Quadragesima is the first Sunday in Lent, so called in Remembrance of the 40 Days that *Moses* fasted when they received the Law.

Easter is the principal Feast of all other.

Rogation Sunday is the Sunday Fortnight before *Whitsunday*, so called *quia vos rogat Ecclesia*; the Church commands us to continue Fasting, Processions, and Prayers against bodily and spiritual Wolves.

Pentecost is *Quinquagesima*, so called because there be 50 Days betwixt *Easter* and *Whitsunday* inclusively, observed in Remembrance of the Law given to *Moses*, and to the Holy Ghost that appeared to the Apostles like cloven Tongues, *Acts* ii. 1.

Trinity Sunday is the next Sunday after *Whitsunday*. *Ascension Day* is the Thursday Seven-night before *Whitsunday*; and *Corpus Christi* is the Thursday Seven-night after *Whitsunday*. *Advent Sunday* is the Day before *Barbara Day*, which is always the 4th of *December*.

Before any thing is said concerning Days, Weeks, or Months, which are Parts of Time, I hold it fit to speak somewhat first of Time, and then of the chiefest Parts thereof.

Of Time.

TIME is the Measurer of Motion, or a Number measuring the moving of the first moveable and other mutable Things; which Time had his Beginning with the World, and shall end with

Swallow, 1738.

the same. It consisteth of two Parts; that is, first and last, or before and after; both which are knit together in the Word (*Nunc*) now, or at this present, which is the End of that which went before, and the Beginning of that which followeth after. Some divide Time into three Parts, past, present, and to come. Time present is a Moment indivisible, the Beginner and Ender of Time, and yet the least Part thereof itself.

Time is also divided into greater or lesser Parts; the greater are Calends, Nones, Ides, a Week, a Month, a Year, &c. There is a Space of Time called *Seculum*, an Age, or a Hundred Years. Another space of Time is called *Ævum*, Ten Ages. The lesser Parts of Time are Five. The first is called *Quadrans*, the fourth part of a Day, or six Hours. The Second *Punbus*, the fourth part of an Hour in the Sun's Account, and in the Moon's the fifth part. The third *Momentum*, the tenth part of *Punbus*. The fourth *Uncia*, the twelfth part of *Momentum*. The fifth *Movus*, the forty-eighth part of *Uncia*.

Of a Day.

A Natural Day is the Space of 24 Hours, in which the Sun is carried from the East to the West, and so round about the World into the East again. An artificial Day is the Space that is between the rising of the Sun, to the going down of the same; and the artificial Night is from the Sun's Setting to its Rising.

Of

Swallow, 1738.

Of a Week,

IT's commonly called in Latin *Septimana*, a *septem* & *mane*, which is as much as to say, Seven Mornings, or Seven Days, whereof the first is called Sunday, the second Monday, &c. which Names the *Gentiles* gave to the Seven Days, in Honour to the Seven Planets, whom they worshipped as Gods; For they called the first Day the Day of the Sun, the second the Day of the Moon, and so forth.

Of a Month.

Solar, is that Space of Time in which the Sun runneth through any one to the 12 Signs, being 30 Days.

Lunar, is that Space of Time which the Moon spendeth, while departing from the Sun it returns to the same again.

Usual, is that Number of Days which are set down in our common Kalendars, whereof some contain 30 Days some 31, and February 28, and when it is Leap-Year 29.

Romulus first divided the Year into 10 Months, and called the first Month *Martius*, a *Marie*; the second *April*, ab *aperiendo*; the third *May*, a *majoribus*; the fourth *Junius*, a *junioribus*; the rest *Quintilis*, *Sextilis*, *September*, *October*, &c. because they were 5, 6, 7, 8, &c. Months distant from March. But after, *Numa Pompilius* added two Months more to make 12, calling the one *January*, a *Janua*,

Swallow, 1738.

a *Janna*, because it is a Gate to pass by into the Year. And the other Month he called *Febru*, a *Februo*, id est, a *Plutone*, because the Romans then offered Sacrifice to *Pluto*.

Julius Caesar in his Time altered the Month *Quintilis* to *July*, calling it after his Name. After that *Augustus Caesar* called the Month *Sextilis*, *August*, after his own Name.

Of a Year, and of the Leap-Year.

IN *Latin* it is called *Annus* from *Annulus* a Ring, in respect they both turn round in themselves. *In sua ter vestigia volvitur Annus.*

There be divers Kinds or Differences of Years, and divers Computations had thereof in divers Ages, and amongst divers Nations; but I omit them, and will speak only a word of the *Julian Year*, which is also twofold, common, and bissextile, or Leap-Year; which said common Year consisteth of 365 Days and 6 Hours, which 6 Hours, if they should be reckoned at every Year's End, would make a great Confusion, and therefore is reckoned at the End of every fourth Year, which makes the Leap-Year, consisting of 366 Days: For four times Six maketh 24 Hours, which is one whole natural Day, whereof that Year is called the Leap-Year which Day is added to *February*, because it is the shortest Month, and this Day they put at the 24th of *February*, upon which *St. Matthias's Day* falleth.

	100	0	10	0	1	10	0	3	0	0	4	10	0	6	0	0

Find the Principal in the first Column; and in the other you have the Interest due for One, Three, Six, Nine, or Twelve Months.

A Table

Swallow, 1738.

The Use of the Table.

First girt the Piece about, then look the Length of that Girt under the Title Com. and against it is the Length of a Foot Solid, in Inches and Parts of Inches.

Example.

Suppose a Piece of Timber be 80 Inches about, then look 80 under the Title Com. and against it in the next Column towards the Right hand is three Inches, and 397 decimal Parts of an Inch, (that is 397 Thousand parts, supposing the Inch to be divided into 1000 Parts,) for the Length of a Foot.

For Square Timber.

Divide always 1728 (the Cubick Inches, in a Foot Solid) by the Content at the End, and the Quotient shews the Length of a Foot Solid in Inches.

Example.

Let a Piece of Timber be 12 Inches broad, and 10 Inches deep at the End, and then the Content will be 120 Inches; which dividing 1728, the Quotient is 14 Inches, and $\frac{48}{12}$ Parts for the Length of a Foot Solid.

For Boards.

Divide always 144 (the Inches in a Foot Square) by the Breadth, and the Quotient shews the Length of a Foot square in Inches.

Example.

If a Board be 16 Inches broad, then 144 divided by 16, the Quotient is 9 Inches for the Length of a Foot according to that Breadth.

For Circles.

If the Circumference be given, multiply it by itself, and then by Seven; the last Production divide by 88, and the Quotient shews the Content. If the Diameter be only given, multiply it by itself, and then by 11; the last Product divide by 14, and the Quotient shews the Content.

29	3	9	0	13	11	9	2				
30	3	5	3	13	15	3	2				

Swallow, 1738.

The Use of the Tables.

THE first Table shewing the Decrease of one Pound Yearly at 6 *per cent.* may be used in buying Reversions, &c. As suppose a parcel of Land or House, or the like, whose Fee simple or real worth is 200 *l.* and it be Mortgaged or Leased out for 20 Years, then what is the Reversion of one Pound after 20 Years worth in ready Money? For answer, I look against 20 Years, and find that the Reversion of one Pound after 20 Years is worth but 6*sh* 2*d* 3*q.* then if 1 *l.* be worth 6*sh* 2*d* 3*q.* 200*l.* will be 200 times as much, which will be 62*l.* 5*sh*. 10*d.* for the value of the Reversion required.

The second Table may be used in buying of Leases, &c. as suppose I am to buy a Lease of 10 *l.* *per Annum.* for 21 Years, what ready Money may I give at the rate of 6 *l.* *per cent. per ann.* For answer, I look against 21 Years, and find that 1 *l.* Annuity to continue 21 Years is worth in ready Money 11 *l.* 15 *s.* 3 *d.* 1 *q.* Then I say, if 1 *l.* annuity for 21 Years be worth 11 *l.* 15 *s.* 3 *d.* 1 *q.* Then 10 *l.* annuity for the same time will be worth 10 times as much, which will be 117 *l.* 12 *s.* 8 *d.* 2 *q.* for the value of the Lease required.

The third Table may be used in putting out Money for a certain time at 6 *l.* *per cent. per ann.* as suppose 1 *l.* be let out for 7 Years, what will it amount to in that time, reckoning Interest upon Interest? For answer, I look against 7 Years, and find that 1 *l.* will amount to in that time 1 *l.* 10 *s.* 0 *d.* 3 *q.* then I say, 20 *l.* will amount to 20 times as much, which will be 30 *l.* 1 *s.* 3 *d.*

The use of the following Table is plain and easie, for suppose I am to find *Easter* for the Year 1735. having found the Golden Number 7, and Dominical Letter E, at the bottom of the Table, I look under the Dominical Letter E at the Top, and right against the Golden Number 7, at the left hand, and in the Common Angle of meeting, I find *April 6, Easter-day.*

Swallow, 1738.

A TABLE shewing how to find *Easter* for ever, by the help of the Golden Number and Dominical Letter.
